PROJECTS

Nests Social

[Website](#)

Nests is a user-centric social media platform that offers personalized feeds, eliminates ads, and provides monetization opportunities for creators.

- Develop a user-friendly interface for seamless navigation and engagement.
- Implement a secure user authentication and verification system.
- Design a personalized feed based on user preferences and interests.
- Optimize the platform for mobile responsiveness and cross-browser compatibility.

Google Clone

[WebSite](#) | [GitHub](#)

- Create a user-friendly interface resembling the familiar Google search layout.
- Implement user input fields for search queries and search parameters.
- Integrate Google's API to fetch search results based on user queries.
- Display search results in a visually appealing and organized manner, including titles, snippets, and URLs.

Twitter Clone

[WebSite](#) [GitHub](#)

- Developed a social media clone that pulls data from Firebase and dynamically displays it on screen.
- Create a system to post tweets, including text, images, and videos.
